

I used XAMPP as localhost to complete this assessment.

1. Insert <http://localhost/gdp-checkout/public/> in browser and it will lead to the page below.

The screenshot shows a web browser window with the title "GDP - Checkout". The address bar displays "localhost/gdp-checkout/public/". Below the browser window, there is a form titled "GDP Checkout". The form contains a "Customer" section with a dropdown menu showing "Unilever". Below this is a "Product" section with instructions: "Notes : 1 = Classic Ads , 2 = Standout Ads , 3 = Premium Ads", "Example : 1,2,2,3,3,3 (1 classic ad, 2 standout ads, 3 premium ads)", and "Please follow the format of Example above to fill in the Product field." A text input field contains "1,1,1,3". At the bottom of the form is a "Checkout" button.

2. Choose customer from the drop-down list.
3. Insert the number of advertisement based on their corresponding category.
4. Click on the Checkout button. Then, user will be led to the Checkout Information page as shown below.

The screenshot shows a web browser window with the title "localhost/gdp-checkout/". The address bar displays "localhost/gdp-checkout/public/view-checkout". Below the browser window, there is a form titled "Checkout Information". The form displays the following information: "Order ID : 17", "Customer ID : 4", "Customer Name : Nike", "SKUs Scanned : premium,premium,premium,premium", and "Total Expected : 1519.96". At the bottom of the form is an "Add New Order" button.

5. To add another new order, click on the Add New Order button.
